I opened the machine, removed the belt and then spun the drum by hand and could feel that the drum bearings were shot.

I thought it would be a relatively cheap and easy task replacing the bearings once I sourced the replacement bearing kit for 25 online but for 15 at my local electrical appliance shop. Ive never worked on washing machines before, but since the machine cost 177 brand new in 2005 I thought I had nothing to lose. Removing the drum was a real pita BUT I noticed that the plastic drum housing is a sealed unit. The drum housing is in two pieces originally but I suspect that once the metal drum is inserted into the housing the case is sealed shut either by plastic weld or PVC. Ive confirmed that

the cheaper washing machines like I have cant have the drum housing split to repair the bearings and are mostly disposable units, even if the fault is minor, the repair costs could amount to 50% or more for what the machine was purchased for. I think the lesson learnt is to buy decent and not cheap as it seems the cheap models have a life expectancy of around 35 years. Im looking at the Bosch range and was wondering if MSE members can share any thoughts on the Bosch range of washing machines. Im looking to buy a Bosch WAE24364GB model. Any thoughts on reliability and cost of repairs appreciated. TIA Id recommend this forum, as they give great advice and this guy If youre thinking of a Miele, really scour the internet for deals theres one site sorry, cant remember which one that gives discount and extended warranty on anything thats come up as a Which Best Buy. Wasnt a particularly difficult fix, and some sites suggest you might want to change them after 5 years as a maintenance thing. Its probably been one of the best domestic appliance purchases Ive ever made, However, I keep hearing that the current Bosch range isnt as well made, unless you are willing to spend a lot of money on one of their upmarket models and, looking at them, I can see why people say that.

At that upper pricelevel, however, youre starting to get into Miele territory, so I think, when the Bosch eventually fails, Ill be going for the cheapest Miele I can find. Our last machine lasted almost 10 years without any probs. When it eventually went wrong it was terminal. Replaced with newer model delighted with performance. Have since changed most other appliances to Bosch with similar satisfaction. Highly recommend I was told by the shop assistant that the more expensive ones are made in Germany and have better quality control than the cheaper ones, but our cheap one has 4 loads a day pretty much every day and has just hit the 2 year mark. Which doesnt sound much but other brands have made it that far then died, with that level of usage. No problems so far and would buy another. Cost about 280 new, so one of the cheaper ones. It must work alright because I cant remember buying a new one in a few years. The only washing machines that are designed to last now are Miele.
